

1st May 2022 Price Increase

Dear Valued Customer,

The Previous 18-24 months have been among the most volatile trading periods in recent memory. At C.A.R.S. we have always tried to minimise any impact in price increases reaching our customers.

During the previous 17 years we have only needed to increase our prices on one occasion, that of the 2008 financial crisis.

However due to the large increase in Fuel and running cost over the past few months, we have reluctantly had to raise our service prices as of the 1st of May 2022.

In Most cases standard emissions customers will see an increase of £55+vat over the two visits in a calibration year. Full bay calibrations will see an increase of £85+vat over the year.

We have done our best to minimise this increase, and we will review it on a quarterly basis, hopeful that fuel and transport cost can reduce to sensible level.

Best Regards,

Ben Schofield
Director
C.A.R.S. LTD.
